

# ASTROPHYSICS SEMINAR

日時	2004年5月25日(火) 4:00pm – 5:00pm
場所	3号館 376室
講師	Patrick François (Observatoire de Paris)
題目	UVES Large Program First Stars : Abundance of heavy elements

## 講演要旨

39 night of UVES at the VLT have been allocated to determine the chemical composition of a sample of 35 extremely metal poor stars. During this talk, I will present the results concerning the detailed chemical composition of these "First Stars" from Carbon to Uranium. These results will be discussed in the light of models of chemical evolution of the Galaxy.
